- Môn học trước: Thực tập tốt nghiệp
- Điều kiện: Sinh viên tích lũy đủ 120 tín chỉ có thể làm luận văn
- Mô tả vắn tắt nội dung: Luận văn là các dự án loại công nghiệp, được thiết kế để đảm bảo sinh viên đã nắm vững các môn học của mình trong chương trình. Tất cả các dự án đều dựa trên các "dự án thực tế" do ngành công nghiệp cung cấp cho sinh viên để làm việc phát triển kỹ năng và áp dụng kiến thức thu được từ tất cả các khóa học trong suốt chương trình. Sinh viên sẽ làm việc độc lập để phát triển các yêu cầu, thiết kế, thực hiện và cung cấp giải pháp cho các vấn đề kinh doanh. Sinh viên có thể theo bất kỳ mô hình quy trình thích hợp nào, phải tự quản lý dự án, theo tất cả các kỹ thuật quản lý dự án phù hợp.

Thành công của dự án được xác định phần lớn bởi việc sinh viên có giải quyết được vấn đề của khách hàng một cách đầy đủ hay không.

- Sinh viên sẽ cung cấp các sản phẩm cuối cùng với tất cả các hiện vật phù hợp với mô hình quy trình đang sử dụng (ví dụ: kế hoạch dự án, yêu cầu kỹ thuật, tài liệu kiến trúc hệ thống và phần mềm, tài liệu thiết kế, kế hoạch kiểm thử, mã nguồn và các sản phẩm phần mềm cài đặt).

Required and recommended prerequisites for joining the course	- Prerequisites: Students must fulfil ONE of the following requirements to attend this course: • hold TOEFL iBT certificate with score ≥ 61 • hold IELTS certificate with score ≥ 5.5 • complete IE2 course (for IU program)/ IE3 course (for twinning programs) - Corequisites: (Course code – Course name): None - Previous course (Course code – Course name): None									
Course objectives	There are a number of objectives embedded in various teaching activities in Listening AE1 course: - Pre-listening activities: aim to activate students’ current knowledge of the topic, and to provide them with lecture language and effective strategies in listening and note-taking to prepare themselves for the coming lecture. These activities include reading (this can be done before class meetings), discussing and reviewing what they have learned from the reading. - While-listening and post-listening activities: aim to enable students to put their newly activated knowledge and acquired strategies into work by taking notes on the lecture, using the outline given by the teacher or prepared by themselves. They are later on asked to assess their understanding based on their notes and discuss them with their classmates. Finally, as an optional activity, depending on time and students’ needs, students are asked to summarize the lecture. - Follow-up activities: students are required to discuss the lecture topic and to prepare arguments for or against the topic in the debate. The purpose is to enhance students’ comprehension of the lecture, and to allow them to put their acquired academic language into practice, and to experience the atmosphere of a university lecture class.

Course objectives	This course introduces students to the basic knowledge on Artificial Intelligence. Artificial intelligence (AI) is a research field that studies how to realize the intelligent human behaviors on a computer. The ultimate goal of AI is to make a computer that can learn, plan, and solve problems autonomously. In this course, student will learn the foundational principles and practice implementing some of these applications including representation, problem solving, and learning methods of artificial intelligence. Accordingly, students should be able to develop intelligent systems by assembling solutions to concrete computational problems; understand the role of knowledge representation, problem solving, and learning in intelligent-system engineering; and appreciate the role of problem solving, vision, and language in understanding human intelligence from a computational perspective.

Course objectives	A Decision Support System (DSS) is an interactive computer-based system or subsystem intended to help decision makers use communications technologies, data, documents, knowledge and/or models to identify and solve problems, complete decision process tasks, and make decisions. DSS simulate cognitive decision-making functions of humans based on artificial intelligence methodologies (including expert systems, data mining, machine learning, connectionism, logistical reasoning, etc.) in order to perform decision support functions. DSS is a general term for any computer application that enhances a person or group's ability to make decisions. Also, DSS refers to an academic field of research that involves designing and studying DSS in their context of use.
Course learning outcomes	CLO 1. Understand the goals and different forms of decision support, and gain knowledge of the practical issues of implementation CLO 2. Examine systems based on statistical and logical approaches to decision making that include statistical prediction, rule-based systems, case-based reasoning, neural networks, fuzzy logic, etc. CLO 3. Obtain an overview of the various computerized decision support techniques together with a detailed assessment of successful and unsuccessful applications developed CLO 4. Examine the actual and potential impact of the technology together with the challenges associated with this kind of application

It also promotes a deeper understanding of what is required to be a successful entrepreneur, highlights the skills and tools necessary to start a new business and explores alternatives to common pitfalls. This course applies entrepreneurial marketing approaches used by successful entrepreneurs. These include utilizing industry sector trends, identifying emerging customer niches, developing new products/services, using guerilla marketing strategies, and Internet and social marketing strategies. It emphasizes the importance of managing cash flows, ratio analysis, pro forma development, and the basics of deal structure and harvesting a business venture. Students will identify and interpret sources of information from company financial reports, financial publications, industry benchmarks, the media, and web sites. An introduction to the process of researching, writing, and presenting a business plan. Students identify and screen ideas using a business feasibility study that describes the product features, market opportunity, customer profile, sales forecast, competitive advantage, and profit potential. Following a successful feasibility study, students may use business plan software as each develops their own complete business plan.

Conclusions and related outcomes (implications and consequences)	Conclusions and related outcomes (consequences and implications) are logical and reflect student's informed evaluation and ability to place evidence and perspectives discussed in priority order. Course objectives	Dissertations are industrial projects designed to ensure that students have mastered their subjects in the program. All projects are based on "real projects" provided by the industry to students to develop skills and apply knowledge gained from all courses throughout the program. Students will work independently to develop requirements, design, implement and provide solutions to business problems. Students can follow any appropriate process model, must self-manage the project, follow all appropriate project management techniques. The success of the project is largely determined by whether the student adequately solves the client's problem. Students will provide the final product with all artifacts that match the process model being used (e.g. project plan, technical requirements, system architecture, design documentation, test plan, source code and installed software products). Or students can choose the basic research to do the thesis.
